

You will find them everywhere in everything

If you search for *divisibility*,
you will find it everywhere in everything!

If you search for *comparability*,
you will find it everywhere in everything!

If you search for *connectivity*,
you will find it everywhere in everything!

If you search for *sensitivity*,
you will find it everywhere in everything!

If you search for *transformability*,
you will find it everywhere in everything!

If you search for *substitutability*,
you will find it everywhere in everything!

If you search for *satisfiability*,
you will find it everywhere in everything!

Doesn't science search and study the *divisibility* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the *comparability* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the *connectivity* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the *sensitivity* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the *transformability* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the *substitutability* of atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

Doesn't science search and study the conditions which could be satisfied (*satisfiability*) by atoms, molecules, ions, cells, organelles, tissues, organs, guilds, words, numbers, equations, instruments, and other entities? Yes, science searches for it everywhere in everything!

What will you do if nothing has divisibility, comparability, connectivity, sensitivity, transformability, substitutability, and statisfiability?

What would your knowledge be if nothing has divisibility, comparability, connectivity, sensitivity, transformability, substitutability, and statisfiability?

- Sivashanmugam, President of Intellectual Development Foundation
